## Product End of Life Update

- **Symantec Recommends Storage Exec customers migrate to NTP Software QFS®**
- **NTP Software offers File Screening, Quota Management and On-Demand Archiving for Symantec Storage Exec Customers**

Dear Storage Exec Customer,

Just over a year ago Symantec sent you a notice that Symantec Storage Exec had reached its End of Life. We understand that it is likely that you continue to need the storage management functionality found in Storage Exec. Therefore, we recommend Storage Exec customers leverage Symantec's partnership with NTP Software and integration with NTP Software's QFS®.

For over 15 years, NTP Software has been helping companies manage storage growth through policies and quotas. NTP Software's QFS provides policy-based, real-time, enterprise-wide control over unstructured data on a variety of host platforms. This enables managing and enforcing storage policies enterprise-wide, including file blocking and quotas on the disk space consumed by your users.

Storage Exec is a feature rich product that has traditionally been matched by NTP Software QFS as joint market leaders prior to the End of Life announcement. This makes QFS an ideal migration option. To facilitate an easy migration, NTP Software has developed a utility that allows policies to be imported from Storage Exec to NTP Software QFS.

Additionally, NTP Software, with Symantec, has created an On-Demand Archiving™ module (ODA™). This module provides for Quota-Driven Archiving™ and User-Driven Archiving™, which are enhanced methods for archiving data from your file server with Enterprise Vault File System Archiving.

NTP Software is now providing special pricing for Storage Exec customers.
